Students Module

Register, manage, promote, and graduate students

Version 1.0 · May 2026

1. Overview

The Students module is where every learner in your school is registered and managed. Each student receives a unique registration number, is assigned to a class, and is linked to a parent or guardian. The system automatically handles new vs returning student logic, day vs boarding fee differences, and bill generation when a student joins.

What you can do here

- Add a new student (with auto-generated reg number)
- Edit student details (name, class, parent info, photo)
- Mark students as graduated, transferred, or withdrawn
- Promote students at the end of a session
- Import students in bulk from a CSV file
- Export student lists for sharing or reporting

NOTE

When you add a new student in the current term, the system automatically creates their bills using the active bill configuration. You do not need to bill students one by one.

2. Adding a New Student

Step-by-step

1. In the left sidebar, click **Students**.
2. Click the blue + **Add Student** button at the top right of the page.
3. A form opens. The **Registration Number** is filled in automatically based on the format you set in Settings -> Reg Numbers. You can leave it as-is or override it.
4. Fill in the required fields: **First Name**, **Last Name**, **Gender**, **Class**, **Entry Type** (new or returning), and **Student Type** (Day or Boarding).
5. Optional fields: middle name, date of birth, phone, address, parent name, parent phone, parent email. You can complete these later.
6. To upload a passport photograph, click the photo placeholder and pick an image file. The image stays on the computer and is shown on the student profile and receipt.
7. Click **Save Student**. The student is added and bills for the current term are created automatically based on their gender, class, and student type.

TIP

If you see "Please select a student type (Day or Boarding)" after clicking Save, scroll up — the Boarding Type field needs a value. The default is Day; you only need to change it if the student is a boarder.

3. Understanding Registration Numbers

Every student gets a unique registration number when added. The format is controlled from Settings -> Registration Numbers, where you can pick a prefix (e.g., *SCH*), a year part, and a sequential counter that resets per session or runs continuously.

Prefix	A short tag for your school, e.g., SCH, ABC. Appears at the start of every reg number.
Year	Two or four digit year of the current session.
Sequence	Auto-incrementing number, padded with zeros (e.g., 0001, 0023).
Reset Rule	Whether the counter restarts each session or continues forever.

Examples of valid formats:

SCH/2024/0001 -> School prefix + year + sequence

ABC-25-007 -> Short prefix + 2-digit year + sequence

24/0001 -> Year + sequence only

4. Editing and Deleting Students

Edit a student

1. On the Students page, find the student (use the search box at the top to filter by name or reg number).
2. Click the **pencil** icon at the right end of the row.
3. The form opens with the existing data filled in. Change what you need and click **Save Student**.

Delete a student

1. Click the **trash** icon at the right end of the row.
2. A confirmation box asks if you are sure. Click **Delete** to confirm.
3. The student is removed along with all their bills and history.

IMPORTANT

Deleting a student permanently removes their record, including all bills and payment history. For students who have left, use **Mark as Graduated/Transferred/Withdrawn** instead — this keeps their records for audit while removing them from active lists.

5. Promoting Students (End of Session)

At the end of an academic session, you promote students to the next class. The system does this in bulk so you do not have to edit each student individually.

1. Click **Sessions & Terms** in the sidebar.
2. Set the **new session** as the current session (and select its First Term as the current term).
3. Click **Students** in the sidebar, then click the **Promote** button at the top right.
4. Select the classes whose students should be promoted (e.g., JSS1 -> JSS2, SS2 -> SS3).
5. Review the list shown. Students who failed or stayed back can be unchecked individually.
6. Click **Promote Selected**. The system updates each student's class and creates bills for the new term using the new class's bill configuration.

NOTE

Final-year students (e.g., SS3) should be marked as **Graduated** not promoted. The Promote page has a "Graduate" toggle for the highest class.

6. Common Issues and Solutions

"Registration number already exists"	A student with that reg number is already in the system. Check for duplicates or let the system auto-generate a new one.
Photo does not show	The photo file must exist on the computer. If you renamed or deleted the original file, re-upload it via Edit Student.
Bills not generated	Either no current term is set (check Sessions page) or no bill configuration exists for the student's class. Set up bills in Fees -> Bill Configuration first.
Cannot delete student	Students with payment records cannot be deleted to preserve audit trail. Mark them as Graduated or Transferred instead.
