Reports Module

Generate, print, and export school finance reports

Version 1.0 · May 2026

1. Overview

The Reports module pulls data from across the system into printable, exportable reports — student statements, class collections, debtors lists, daily and termly summaries. Every report can be printed, saved as PDF, or exported to Excel.

Available reports

Student Statement	Full bills and payments for one student, per term — like a bank statement.
Class Collection	How much each class has collected vs billed in a term.
Debtors List	Students with outstanding balances, grouped by class.
Daily Collection	All payments on a given day, totalled by method (Cash/Bank/POS).
Termly Summary	High-level totals for the term: billed, paid, outstanding, by fee item.
Account Report	Bills and payments for one fee item across the school.
Payment Audit	Reconciliation view filtered by date and user.

2. Printing a Student Statement

The most common report. Parents often request a statement to see what was billed, what was paid, and the outstanding balance.

1. Click **Students** in the sidebar, find the student, and click their name to open the profile.
2. Click the **Statement** tab.
3. Optionally choose a specific session or term at the top (defaults to current term).
4. Click **Print Statement**. A clean, branded statement opens in a print preview.
5. Click the printer icon, or save as PDF to email the parent.

TIP

The statement automatically includes the school logo, name, and contact details from Settings -> School Profile. Update those first so the printout looks professional.

3. Generating a Debtors List

At any point in the term, see exactly who owes money and how much. Useful for the bursar before sending reminder SMS or for the principal before parents' meetings.

1. Click **Reports -> Debtors** in the sidebar.
2. Optionally filter by class — leave on "All Classes" to see everyone.
3. Optionally set a threshold (e.g., "Owing more than ₦10,000") to focus on serious cases.
4. The list shows each student with their reg number, class, total bill, total paid, and balance.

5. Click **Send Reminder SMS** at the bottom to text every parent on the list at once (requires SMS provider to be set up in Settings).

6. Click **Export Excel** to download a spreadsheet for the principal's meeting.

4. Daily Collection Report

1. Click **Reports -> Daily Collection** in the sidebar.

2. Pick a **Date** (defaults to today).

3. The page shows totals by method: Cash, Bank Transfer, POS, Cheque, and the grand total.

4. Below the totals, every payment for the day is listed with student name, receipt number, time, amount, and method.

5. Use **Print** for the day's reconciliation file.

5. Termly Summary (for Management)

High-level report for the proprietor or principal — what fees were billed, what came in, how much is still outstanding, and which classes are paying well or badly.

1. Click **Reports -> Termly Summary** in the sidebar.
2. Pick the **Session** and **Term**.
3. The page shows: total billed, total paid (split by method), total outstanding, collection rate %, and a per-class breakdown.
4. Scroll down for the per-fee-item summary — see exactly how much of "Tuition" vs "PTA Levy" has been collected.
5. Click **Export Excel** for offline analysis or **Print** for the management meeting.

6. Tips for Better Reports

Update school profile first	Settings -> School Profile. Add the logo, full address, phone, and account details — they appear on every printed report.
Use date filters carefully	Daily reports default to today. To get yesterday's reconciliation, change the date filter.
Export to Excel for analysis	Almost every report has an Export Excel button. Use it for sorting, pivoting, or sharing with the accountant.
Print to PDF instead of paper	In the print dialog, choose "Microsoft Print to PDF" or "Save as PDF" to keep digital archives without paper waste.
Compare term over term	Open Termly Summary in two browser tabs — one with the current term, one with last term — to spot trends.

NOTE

All reports respect user roles. Bursars see operational reports; Viewers can read but not export; Admins see everything. If a report is missing, check your user role.
